

AirBlast

for SML500e, SML1000e, SML1800e

PRICE
€ 2.400,-
+ installation

AirBlast

The AirBlast Option for CNC machines has become ready for serial production. AirBlast allows the removal of swarf by means of compressed air blasts* directed at the tool top. Production can thus be carried out even more efficiently. If required, users can also activate the AirBlast manually during the machining process (only manual control with FANUC 0iTC) or via M-commands in the CNC program. This guarantees a more efficient manufacturing. The AirBlast Option is available for all SMLe machines. AirBlast is included in SML500e machines with the BLS120 Option, as well as in the SML1000e and SML1800e machines. The option can further be retrofitted to all other machine versions. For more information please contact our export managers » sales@seal-maker.com

* An air compressor (min 4 bar) needs to be provided by the customer or can be quoted separately.

Parts included

- ➔ Pneumatic maintenance unit
- ➔ AirBlast pneumatic cylinder unit
- ➔ Valves, piping and accessories
