The Company

Semi-finished Products + Lathe Machine = Seal

With this brilliantly simple idea the first professional seal manufacturing lathes started their triumphant success in the late 1980's, a successful way which is still continuing. Lathe cut seals have become an integral part of modern seal technology and are being used in all sectors of industry.

In the year 1997 we have established Seal Maker in order to further develop this successful technology, and to bring it to clients all over the world. The outstanding quality of our products, the excellent service we render, as well as clear, open-minded and global business principles are of utmost importance for us.

In the meantime our network with satisfied customers, partners with friendship ties, and competent service centers embraces the whole world, which proves that we have taken the right direction, and also spurs us to always be one step ahead.

The system for flexible seal production

Seal Maker offers a complete quality assured system which comprises the whole range of components from lathe machines and materials as far as to the flexible, fast and efficient production of lathe cut seals.

Besides the special importance in the MRO market (Maintenance, Repair & Overhaul), in which short delivery times of small and medium manufacturing lots are of importance, the lathe cut seal is also gaining more and more importance in the OEM sector (Original Equipment Manufacturer).

With the worldwide established distribution channels a competent and reliable Seal Maker partner will always be close by, who keeps up with our high quality standards.
